Mobile Application Programming

TERM PROJECT PROPOSAL

Milestone 1

Instructions

Group Number	Group 01
Project Title	MASARAK مسارك
GitHub Repository URL	https://github.com/janashammar1/CSC402-Mobile-Project.git
Submission Date	10 / 09 / 2026
Instructor	Dr.Nourah Alqahtani

1 Team Members

#	Full Name	Student ID	Role / Responsibility	Email
1	Jana Al-Shammary	2240006642	Team Lead, Front-End & Integration Developer	2240006642@iau.edu.sa
2	Maha AlJoaib	2240006849	UI/UX & Front-End Developer	2240006849@iau.edu.sa
3	Alya Shehab	2240002062	Back-End & Workflow Developer	2240002062@iau.edu.sa
4	Raghad Alqahtani	2240001622	Evaluation, Reporting & Export Developer	2240001622@iau.edu.sa
5	Aisha Alhuzaym	2240002568	QA, Testing & Communication Developer	2240002568@iau.edu.sa
6	Fatima Alomran	2240006720	Database & Data Management Developer	2240006720@iau.edu.sa
7	Rawan Muslim	2240001473	Authentication & User Management Developer	2240001473@iau.edu.sa

2 Project Overview

2.1 Problem Statement — what real problem does this app solve?

Students and supervisors involved in cooperative training face difficulty in maintaining a clear and complete view of the training journey when attendance, working hours, tasks, reports, evaluations, and communication are managed through separate channels and tools. Although students and supervisors need to continuously track progress and document training requirements throughout the training period, information scattered across email, forms, learning platforms, and other tools makes it difficult to maintain an updated and complete student training record. This may result in delayed submissions, missing or scattered records, and limited visibility into the student's progress.

Students may also have limited access to regular feedback that helps them understand their weekly performance and identify areas that require improvement. At the same time, academic supervisors may find it difficult to continuously monitor attendance, working hours, evaluations, and the nature of the tasks assigned to each student. This becomes particularly important when some assigned tasks are not sufficiently related to the student's academic major or do not meet the objectives of cooperative training, and the issue is only identified at a late stage. When such problems are discovered late, there may be limited opportunity for timely intervention, which can negatively affect the quality of the training experience, the achievement of academic training objectives, the approval of the training, and the student's final evaluation.

2.2 Target Users — who is this app for?

Students: University students enrolled in cooperative training.

Field Supervisors: Supervisors at training organizations who monitor students' attendance, assigned tasks, progress, and performance.

Academic Supervisors: University supervisors who monitor students' training progress and verify that assigned tasks are relevant to their academic majors and meet cooperative training requirements.

2.3 Proposed Solution — how does your app solve the problem, in 3–5 sentences?

The proposed mobile application addresses the fragmented management of cooperative training by bringing the student, field supervisor, and academic supervisor into one structured training workflow. It centralizes the student's training records and allows progress, attendance, tasks, evaluations, and reports to be followed throughout the training period instead of being scattered across separate channels. The application also gives academic supervisors continuous visibility into the student's progress and the relevance of assigned tasks to the academic major, allowing concerns to be identified earlier. This creates a clearer and more organized training process for all three parties and supports timely follow-up before issues affect the final training outcome.

2.4 What makes this idea worth building? — why this app, why your team?

This idea is worth building because it addresses a recurring operational and academic challenge in cooperative training. Its value goes beyond recording attendance or collecting reports; it provides continuous visibility into student progress, task relevance, supervisor evaluations, and training performance throughout the training period. By creating clearer responsibilities and a documented training process among students, field supervisors, and academic supervisors, the application can help identify issues earlier and support timely intervention before they affect the quality or final outcome of the training experience. Our team is well suited to build this application because the project aligns with our current mobile development course and allows us to apply our skills in Kotlin, Jetpack Compose, UI/UX design, GitHub collaboration, and software engineering.

3 Core Features (MVP Scope)

Feature	Description	Priority
Training Record Setup & Role-Based Access	Creates a dedicated training record for each student and links the student with the assigned field and academic supervisors, while providing role-based access and permissions for each user.	Must
Attendance, Training Hours & Reports	Allows attendance and training hours to be recorded and verified by the field supervisor, while keeping the student's required reports in one record.	Must
Task Documentation & Progress Tracking	Allows students to document assigned tasks, track progress and time spent, indicate whether the work was completed individually or as part of a team, and attach supporting evidence when needed.	Must
Task Verification & Supervisor Approval	Allows field supervisors to review submitted tasks, verify completion, assess work quality and timeliness, and approve, return, or mark tasks as incomplete.	Must
Task Relevance Review & Academic Alerts	Allows academic supervisors to review and classify submitted tasks based on their relevance to the student's academic major, and receive alerts when unrelated or unsuitable tasks become frequent.	Must
Weekly & Final Evaluations	Allows field supervisors to provide weekly and final evaluations, enabling students to track their performance and improvement over time while giving academic supervisors continuous visibility into the student's progress throughout the training period.	Must

Public - عام

Feature	Description	Priority
In-App Communication	Provides a documented communication channel between students, field supervisors, and academic supervisors for training-related questions, feedback, and follow-up throughout the training period.	Should
Training Record Export	Allows the student and academic supervisor to export attendance, completed tasks, evaluations, and reports as one organized PDF file at the end of the training period.	Could

4 AI Use & Disclosure

Tool / Model	Where Used (file / feature)	Pair Programmer or Ghost Writer?
ChatGPT	Organizing the project ideas and arranging the proposed features in a clear and logical sequence	Pair Programmer
ChatGPT	Reviewing and improving the wording of selected paragraphs and correcting language errors	Pair Programmer

5 Milestone Timeline

Milestone	Focus	Target Date
M1	Team Formation & Proposal	10 September 2026
M2	UI/UX Design & Architecture	01 October 2026
M3	Core Development Sprint	22 October 2026
M4	Feature Completion — Beta Build	12 November 2026
M5	Testing, Polish & Documentation	03 December 2026
Final	Submission & Presentation	13 December 2026

6 Anticipated Risks & Challenges

1. Limited Mobile Development Experience:

Some team members may be new to Kotlin and Jetpack Compose, which may slow development. The team will use practice tasks and shared resources to build the required skills.

2. Team Coordination and GitHub Conflicts:

Working with seven members may cause merge conflicts or duplicated work. Each feature will have a clear owner and separate branch, with changes reviewed before merging.

3. Project Scope and Time Constraints:

The planned features may exceed the available development time. The team will prioritize Must features first and postpone lower-priority features if needed.
